

Slab Leaks

At **Curly's Plumbing Inc.**, we try to make the process as painless as we possibly can. We will first come and determine that you do indeed have a slab leak and that it is not coming from something else like possibly an AC condensate line. Once we determine that you do have a slab leak, we will perform a pressure test on the water lines. We do this because the leak is not always at the location of the water that is showing. The water will take the path of least resistance and this could be several feet from the water. We will do this by isolating the line and pressurizing it. Once the line is pressurized, we use very sensitive sound equipment to pinpoint the leak location. Then when we know exactly where the leak is we can tell you how much it is going to cost to repair. Many things go into the price of the repair, but it is mainly based on where the leak is coming from. This can become a very serious situation so don't hesitate to have one of **Curly's Plumbing Inc.** professional leak locators get this taken care of ASAP.

Jetter Service

A hydro-jetter uses high-pressure water to clean blocked sewer lines instead of the standard cable that plumbers use to free up sewer lines. It is capable of breaking things loose that you would otherwise not be able to clear such as grease, and it gives you sewer line a full cleanse. Another advantage is that a sewer cable is limited to about 200 feet while the jetter can clean lines as long as 1000 feet. If you call us early, we can get to you the same day in most cases.

Gas Tests

The need for a gas test can stem from many different issues. However, the technicians at **Curly's Plumbing Inc.** can handle them all. If you know you need a gas test, we can take care of you. We can handle all work and city permits you may need to get back up and running quickly. To perform a gas test, the line will be isolated and pressurized with a gauge. If we see the pressure drop then we know that you have a leak. At that point, we will begin to track down any leaks you may have. Once they are found, the tech would be able to give you an estimate on the cost of the repairs of the leaks. After all repairs are made, we will get a permit with the city and have it inspected so you can get your gas back up and running like normal.

Drain Cleaning.

Bathtub draining slowly? Toilets gurgling? Had another company out and your still having issues? **Curly's Plumbing Inc.** can handle any drain issue you come across. We have over 10 years of experience cleaning drains and know how to get it done right the first time. We can clean things as small as a bathroom sinks all the way up to a 200-foot main sewer lines. Our employee's are trained in making sure the line is fully clear to avoid having a half-fixed problem. Call us now to have a fully trained technician come relieve your drain problems today.

Backflow Devices

Have you recently received a letter from the city telling you, it is time to get your backflow device tested? We have certified backflow technicians that can take good care of issue. We test all kinds of devices on anything you need including main supply lines, sprinkler systems, coke machines and ice machines. Just call us with your due date and we will get you taken care of in a timely manner before it

becomes due with the city. Then if the device ends up requiring any repairs, we can take care of that as well.

Water Heaters Tank/Tankless

At Curly's Plumbing Inc., we have experienced heater installers. Our technicians are experienced in both the standard tank heaters and tankless heaters alike. Call us today for an estimate on having a tank style heater installed. If you are looking into getting a tankless style heater installed, call us to schedule a plumber to come out and give you an estimate. There are many factors that go into making a tankless heater work and everything needs to be considered in choosing the correct system for you. So call us today.
